

## **You are playing under the same lights that lit Super Bowl 2015!**

**LED lighting is the new standard for any high performance sports venue.**

Although these stadium LED lights have been installed in several professional stadiums, they had never been installed to cast light upward onto the ceiling of a dome to reflect light back down onto the playing field. Hudson Valley Sportsdome owner Nicholas Piza had to convince the company engineers that this would work. It has opened up an entirely new market for the lighting company.

Just 32 LED fixtures replaced 96 metal halide fixtures, reducing energy consumption by 75% while increasing the amount of light and improving the quality of the light.

LED lighting provides a brighter and more uniform light while eliminating shadows on the playing surface, creating a more natural environment.

This \$125,000 capital investment project was installed in March 2015 to be eco-friendly and to improve our players' and spectators' experience in our facility.

Hudson Valley Sportsdome has undertaken several green initiatives to be environmentally responsible and reduce the facility's carbon footprint: LED arena lighting, waterless urinals, and energy-efficient hand dryers.
